GREETINGS FOR 1951

A new year and a new list of lovely flowers including many new introductions. We endeavor to sell flowers to cover the complete season so you may have bloom in your garden at all times during the growing season.

We have added a new hybridizer to our list. Mr. Becker is surely making a name in mums. We still list the new introductions of Bristol, Dr. Kraus, Lehman and Yoder Bros., so you should have no trouble finding mums suitable for your gardens or for that fall show that you are planning to win blue ribbons with your entries.

Do you realize that the new flower that is taking the country by storm (The Hemerocallis or Daylily) will never take the place of the IRIS that blooms in the spring or the CHRYSANTHEMUM that blooms in the fall, but will take its own place in the garden to fill in that much needed bloom through the summer months when bloom is so badly needed.

We have listed an extensive list of the SIBERIANS that are coming back into popularity, especially for the shows. Some are new and some are rare collector's items.

The Japanese or Iris Kaempheri were a sight to behold in our gardens last fall and customers and visitors could not resist placing orders for fall delivery. We have since added many new varieties but in fairness to our customers we are listing the requirements of these beautiful flowers. They must never be planted near a sidewalk, driveway, foundation or wall that would allow lime to leach into the beds. They are strictly an acid plant and lime is fatal. They must never be allowed to dry out from early spring to blooming time and then they go dormant and water can be withheld.

We thank all of you for your past patronage and feel that if we can help you in any way on your cultural problems, please let us know.

Our Mums are rooted cuttings, soil grown for a time before shipment. We still treat them with BLACK GOLD for better plants.

Be sure to read our liberal cash discount at the back of catalogue.

Yours for better flowers,

HARRY AND OPHELIA SHOEMAKER.

NEWEST VARIETIES OF ENGLISH CHRYSANTHEMUMS

All the mums listed below were imported from a prominent nursery in England. This nursery specializes in raising mums for the Florist's trade and his standards are so high a plant must produce from ten to twelve ideal blooms of the highest quality, or be discarded. The pictures in this catalogue are actual pictures taken of his stock. He has been very considerate in releasing this stock for the American Public and we sincerely hope that all our customers are as successful raising these lovely mums as the nurseryman who released them to us.

AMBER VALE—A lovely, well shaped flower of bright amber with excellent stems and foliage. Sept.-Oct. **Each \$1.00**

PSEUDACORUS—Bright yellow species with splendid foilage similar to Japanese varieties. Thrives in boggy locations. 36 inches ----- **\$0.35**

JAPANESE (IRIS *Kaempferi*)

CULTURE—Like most azaleas and rhododendrons these iris will not tolerate lime in any form. For best results heavily enriched soil and abundant moisture are necessary. After blooming they require no more moisture than other perennials. An ideal location is along the banks of a stream or pond. They are successfully grown in most parts of the country and do especially well in the Atlantic and Pacific states and the southern borders of the Great Lakes. Plant so that the crowns are about 2 inches below the ground surface. Do not expect typical flowers until the second year as they take more time to become established than bearded iris. In dry climates we cannot stress too strongly the importance of constant moisture during their growing season. In fact, if your water supply is unlimited select a location where you can flood the plants often and you will be rewarded with larger flowers. Any well rotted manure is the best fertilizer. If your soil is alkaline, the addition of aluminum sulphate, peat moss or oak leaf mold will produce the correct soil condition. If the leaves turn yellow, lime very likely is present

and **LIME** is **FATAL** to these iris. Best planted in full sun except in warm sections of the country where afternoon shade will prove beneficial. Keep away from foundations, sidewalks, walls or any place where lime can reach. Shipment Sept. 1st.

THE SIBERIANS

CULTURE—**SIBERIAN** and **SPURIA IRIS** will grow and bloom in almost any soil that suits other perennial flowers. However, they are moisture lovers and will grow twice as high and produce twice as many flowers if kept constantly moist during their growing season. As they are most effective in large clumps they should be planted where they need not be disturbed. All are very hardy and should give no trouble anywhere.

HOSTAS OR PLANTAIN LILIES

The Hostas are excellent for edging borders, mass planting or in front of shrubbery. If you have a shady spot under trees that seems devoid of interest, then by all means try some of these interesting plants for they are at their best grown in such a location where their large sturdy leaves seem almost tropical in growth and very decorative. The racemes of bell like flowers of lilac, blue lavender, and white rise well above the foliage.

Shipment Early Spring or Early Fall

CAERULEA—The true variety has the bluest flowers of any of the Hostas. It is the next largest in size of flower to *H. plantaginea* with very round puffed out bells of lavender blue distinctly penciled on the inner surface with deeper color. The leaves are glossy green of large size and graceful form. Use for border planting with pale yellow *Hemerocallis* in the background. July-August. 3 ft. -----

\$0.50

HOSTA DECORATA—The blunt plantain-lily has blunt dark green leaves with white edges. The leaves are about one foot high and the blade about five inches by three inches. In a couple of years a small plant makes a rosette of leaves two feet across. This rosette of leaves of green and white coloring forms an excellent end for a flower bed against a lawn as the outer leaves bend to the ground. The flowers, in the early part of August, are fat bells standing out at right angles on a two-foot stalk. The blossoms of purple have lines of white, so that the effect is not a solid color. There is a sturdy, substantial feeling to this plant. Formerly listed as Thomas Hogg ----- **\$0.50**

ERROMENA — This Hosta has been identified through illustrations and description in "Bailey Herbarum" as Hosta Erromena. Listed and sold also under names Japonica and Lancifolia Undulata. It is a robust growing plant with dark green leaves with prominent curved veins either side of midrib, blade of leaf about 8 to 10 inches long, about 4 inches broad. Flowers pale lilac bells on stalks 2½ feet tall, blooms in July ----- **\$0.75**

FORTUNEI—A very fine outstanding species with good size glaucous leaves. Makes a fine specimen plant. Foliage not quite as large and more pointed than Seiboldiana. Lavender blue bell shaped flowers on stems 2 ft. or more in July. ----- **\$0.75**

LANCIFOLIA FORTIS — Lance leaf plantain lily. Long lance like foliage, dark green in color, produced in abundance. Flowers are violet. Bloom September and October on stems two feet tall, very floriferous and especially welcome as it is in bloom over a long period in the fall when flowers are scarce. **\$0.40**

SUBCORDATA GRANDIFLORA — Also listed as Plantaginea. Large yellowish green leaves on long stems. Largest blooms of all Hosta. Pure white, lily-like in form. In bloom August-September. 24 inches ----- **\$0.50**

UNDULATA VARIEGATA — This plant has more white in foliage and leaves are more wavy than preceding variety. Blooms in July. Lavender blossoms ----- **\$0.75**

No C. O. D. orders will be accepted. Cash with order please. We advise the use of money orders or checks as cash in the mails is always hazardous. We pay the postage on orders of \$3.00 or more, otherwise add 35c to cover cost of packing and transportation. Kansas residents add 2% of total for sales tax as required by law. If you reside beyond Zone 4 suggest the use of AIR MAIL for mums. Consult your postmaster on rates and if your order exceeds \$3.00 you may deduct 25 cents from your AIR MAIL costs. Compute 1 to 12 plants per pound. All mums are sent insured so be sure to register complaint with your postmaster if plants arrive unsatisfactorily. All complaints must be received by us within 15 days of receipt of stock.

OUR GUARANTEE—We guaranteed all stock to be state inspected and free from insects and disease and to be true to name. We also guarantee all stock to be received by you in good condition and true to name. If found otherwise we will refund the amount paid for said stock on proper proof of error on our part. We give no warranty expressed or implied, and can be in no way responsible for the crop.

With the cost of everything on the upward trend we were forced to raise our prices slightly but to put things on a fairly level keel we offer a liberal cash discount on the total order. You can figure what the cost of each plant is for your own information.

If your order totals—

\$ 3.00 to \$10.00	deduct 10%
\$10.50 to \$15.00	deduct 15%
\$15.50 to \$25.00	deduct 20%
\$25.50 and up	deduct 25%
